PROFILE

I'm a QA Engineer and Test Lead who genuinely cares about shipping software that works — I own quality assurance, change management, and UAT sign-off end-to-end, all while keeping pace with a weekly production release cycle. What sets me apart is a hybrid skill most testers don't have: I also handle UI/UX design, including building and maintaining a client design system, so I'm not just checking whether something functions correctly, I'm evaluating whether it's good to use — in the same pass. I make a point of using AI tools to work smarter, not just faster — from streamlining test documentation to speeding up design and QA workflows — so I can focus my time on the judgment calls that need a human. I hold a Bachelor's degree in Computing at NQF Level 8, with 20 distinctions across coursework spanning software testing, software engineering, and UI/UX design.

WORK EXPERIENCE

QA Engineer, Test Lead — Numeral XII / Jun 2025 – Current

- Own the end-to-end QA process across multiple concurrent projects, ensuring software meets business and functional requirements before every release.
- Develop, execute, and maintain manual test cases and test plans supporting a strict weekly production deployment cadence.
- Coordinate and facilitate business User Acceptance Testing (UAT), securing formal business sign-off ahead of every production deployment — a release-blocking responsibility.
- Serve as the primary quality gate between development, business analysts, and stakeholders, identifying, documenting, and driving resolution of software defects.

EDUCATION

Bachelor's Degree in Computing
— NQF Level 8

Belgium Campus ITversity / 2022 – 2026 / 20 Distinctions

Relevant coursework: Software Testing, Software Engineering, Software Analysis & Design, UI/UX Design, Database Development, Information Systems, Project Management, Web & General Programming, Machine Learning, Final Year Research Dissertation.

Matric Certificate (Substantial Achievement)

Maragon Mooikloof / 2017 – 2021

SKILLS

Testing & QA: Manual & Regression Testing, Test Case & Test Plan Design, UAT Facilitation, Change Management, Risk Management

Automation: Cypress (proof-of-concept development)

UI/UX: UI/UX Design, Figma, Wireframing & Prototyping, Accessibility & Usability Review

Tools: Jira, Confluence, MS Office

- Perform regression testing and final production-readiness validation on all releases, maintaining consistent release quality under a demanding weekly cycle.
- Support Change Management by preparing release documentation and coordinating production deployment logistics.
- Act as a UI/UX resource on the team: perform UI/UX validation on new features to ensure functional and usability standards are met prior to release.
- Identified an opportunity to introduce automated regression testing and independently built a Cypress proof-of-concept; on evaluating long-term maintenance demands as the main QA resource on a weekly release schedule, made the judgment call to shelve full automation and instead recommended a scoped, high-value smoke-test approach — demonstrating pragmatic technical decision-making over automation for its own sake.
- Translate business requirements into comprehensive test scenarios in direct collaboration with business users, ensuring delivered functionality matches business expectations.
- Participate in Agile ceremonies including sprint planning, backlog refinement, and release planning.

UI/UX Designer — Intern — Fintegrate (Pty) Ltd / Dec 2024 – Jun 2025

- Designed and refined user interfaces for internal and client-facing web applications using Figma.
- Created wireframes, mock-ups, and interactive prototypes to support product development from concept through handoff.
- Collaborated directly with developers and business stakeholders to translate business requirements into concrete UX improvements.
- Built and maintained a reusable component library to keep design consistent across multiple applications.
- Improved user journeys, accessibility, and overall usability of existing applications based on stakeholder and user feedback.
- Participated in Agile development processes, including sprint planning and design discussions.
